

A Fun Short Course in Beginning Radionics
By “Pennsylvania Pete” Radatti

Document Version: 9 September 2013

This Course

This was written to be an introduction to Radionics. Normally, my introduction to Radionics is a multi-step approach that takes about 5 hours. This course was written to be effective in a 2-hour, instructor-lead course followed by the independent study of the student of this and other training materials.

PREFACE

Your World View is Important--Opening Your Mind.

"In each century since the beginning of the world, wonderful things have been discovered. In the last century, more amazing things were found out than in any century before. In this new century, hundreds of things still more astounding will be brought to light. At first, people refuse to believe that a strange new thing can be done; then they begin to hope it can be done; then they see it can be done – then it is done and all the world wonders why it was not done centuries ago. One of the new things people began to find out in the last century was that thoughts – just mere thoughts – are as powerful as electric batteries -- as good for one as sunlight is, or as bad for one as poison."

Frances Hodgson Burnett
The Secret Garden – Autumn, 1910

The famous British author Rupert Sheldrake was once a guest at the TED conference (a non-profit devoted to Technology, Entertainment, Design concepts worth spreading—website www.ted.com). His speech was recorded and appears on YouTube but was banned from display on the official TED website. Why? Because it caused people to open their minds and reject many so-called scientific facts by revealing that the game was crooked. In science, we are taught that certain facts are unchanging laws. These laws then become the foundation upon which all research is built. What happens if these laws are not unchanging and, in fact, the game is rigged by "professionals" who have their own status in mind first and the laws of nature last?

An example of such a law is the speed of light. "The speed of light = 299 792 458 meters / second." (In a vacuum. – PVR). Notice how clean and factual and authoritative that statement is? No messing about; this is what it is and always shall be. The problem with this specific fact, as with almost all facts, is that it is *wrong*. The speed of light was monitored constantly between 1928 and 1945 and found to drop about 20Km/s during that time period. This severely upset the world view of Metrologists. Metrology is the science of measurement and is made up of folks who define measurements for the rest of us. They solved the problem in 1972 by redefining the meter in terms of the speed of light. When the speed of light changes, the length of the meter changes accordingly, in order to maintain the constant. In other words, the speed of light is now a lie and everything based upon the speed of light or the length of the meter is wrong. A similar thing has happened with the Gravity constant.

What I want you to understand is that the way you view the world can become self-fulfilling. It is important to understand that "authorities"--the "high priests of science"--are not *true* authorities; they are willing to be blinded to the truth of nature when it is convenient for them. Science that says that Radionics is fake is *wrong*. Other scientists say that psychic abilities exist and are common, but they are ridiculed. If you believe the naysayers and think that you can't learn Radionics, then it will become a self-fulfilling prophecy. If you believe you can learn and become successful at Radionics, then you will. -- Pete

CHAPTER 1

What is Radionics?

Radionics is a means of focusing and amplifying your intention to interact with the energy and spiritual aspects of existence. As such, it allows you to balance and direct energy fields and vectors that compromise existence. There are many explanations of how Radionics works, including strong hints in Quantum Mechanics. How it works is less important than the fact that it works and you can learn and use it to improve your life. In fact, it may be the most powerful single tool you ever use.

CHAPTER 2

Why Learn Radionics?

There are a lot of reasons to learn how to use these energies—from helping others to helping yourself to self-realization but one of the most powerful reasons is that Radionics is fun! You don't hear people talk about Radionics in that way often because it is a powerful tool, its results can seem miraculous, and people tend to focus on the results and not the process. Every time you use Radionics you become better at it, and I think there are lasting benefits to just practicing Radionics much like martial arts.

Radionics can be like playing a game, you are pitting your intellect against a problem with hidden issues and results that are not visible until the game's end. Let's take an example of a potted flower. Why is it not thriving? You can run the charts and balance the energies for the plant, but maybe nothing has changed. Something is wrong and you need to treasure-hunt until you figure out what it is and balance it. Not everything is contained on a chart and sometimes you need to prospect, using a technique called cold scanning, but even here you need to know what you are looking for.

Radionics can be as much fun as a game, as exciting as a mystery novel and one of the most powerful tools you will ever learn.

Relax, sit back, take a deep breath, but, most of all, have fun!

CHAPTER 3

Radionics in the United States

This chapter provides an opinion, not legal advice, as I am not an attorney and not qualified to provide legal advice.

Modern electronic Radionics started in the United States but it is now an underground movement in the United States. Even where legal, it is generally not openly spoken about. Mostly, this is because of well-intentioned government suppression to keep Radionics out of the medical profession. It is considered practicing medicine without a license when used to “treat” humans for medical problems. When performed by licensed medical doctors in the United States, it is considered practicing outside of mainstream, evidence-based medicine and may be punished. This is further augmented by the FDA’s belief that Radionics is “hokum” or “quack medicine”. I have been told many times by practitioners that Radionics is legal for non-human purposes, such as agriculture or the growth of farm animals. I also believe it is legal for affecting non-medical things, such as “luck”, or when used as a form of prayer.

Generally, when learning Radionics, most students do not have a witness ready to focus the machine and, therefore, use themselves as the target. Since this is for the purpose of learning and not actually any kind of treatment, I believe it is legal.

For these reasons, there are words that we never use in the field of Radionics in the United States. Some of these words are: “treat”, “treatment”, “heal”, “cure”, or any other word that may indicate that you are practicing medicine. We are balancing energies, some of which are of a spiritual nature and some of which are of an unknown nature. For that reason, we are always careful to comply with the law and use words like “balance”, or the verb “balancing”. There is no “treatment”.

This only holds true for the United States. Other countries have a long tradition of using Radionics for health care, including government-based health care systems. This warning is especially important for readers who are entering the United States from one of the countries where Radionics is accepted in order to know not to practice it for those purposes here. Laws vary from country to country and you are wise to seek professional advice when needed.

If you start reading any of the older books on Radionics--many of which are published in the United Kingdom--you will learn that Radionics was actively used during World War II and that it is still actively used in the United Kingdom, the Former Soviet Union countries, China and elsewhere.

CHAPTER 4

Radionics Machine Critical Parts Identification

There are different types of Radionics machines, symbolic and electronic. Of the electronic types there are two basic designs, Hieronymus style and Drown/de la Warr style. The Hieronymus design was later vastly improved by Peter Kelly and visually is arranged in banks of two dials. The Drown systems can have hundreds of dials. The Kelly design uses electronics to focus and amplify the results of the system and are considered the best available. This document concentrates on the Hieronymus/Kelly style systems.

This system will generally have 2, 3 or more banks of dials. Each bank contains 2 dials and has a switch that allows the bank to be turned on and off. The dials in each bank are called the Left Hand Dial (LHD) and the Right Hand Dial (RHD). The switch is the bank switch.

In addition to these dials, there is also a dial that is not part of a bank called the Intensity Dial. This dial is used to measure the field intensity of whatever you are analyzing and later serves the dual purpose of determining how much time is needed to balance the field.

The two remaining critical parts is the stick pad and the witness well. The stick pad is normally a smooth plastic area that is used to determine Stick (see next chapter). The witness well is how the machine is focused on a target. If you want to balance your crop in the south field then a photo of the crop in the south field can be placed in the witness well to set the system on that target.

While not part of the machine, rates are critical. A rate is how you focus the machine onto a specific field. Rates are generally arranged in a logical order and these are called charts. There are large libraries of charts available on the Internet and trusted books and an electronic database of all known Kelly rates can be purchased. (See Resources chapter.) Not all rates will work with all systems, and a check should be made to insure compatibility. The de la Warr rates are not generally directly usable on a Kelly system and vice versa.

CHAPTER 5

“Stick”

The words by Hodgson Burnett that you read in the Preface were written over 100 years ago and yet they still hold true today. If anything, we are starting to have a grasp of how little we know, and that is the start of understanding. Radionics is similar to this; the best is yet to come. There are many theories about how Radionics works but no one can point to any specific theory, *including* the theory that it is all delusional. In fact, there is a large body of evidence to prove that Radionics is *real* and *effective*. Radionics is thousands of years old, with a working mechanical Radionics device from ancient Babylonia which you can see in a British Museum today. The technology was lost and rediscovered, probably many times.

Modern electronic Radionics was invented in the United States less than 100 years ago. The fact that modern electronic Radionics is almost forgotten in the United States is a testament to the government’s ability to suppress technology it doesn’t like. Keep in mind that the government used this technology itself, but that was a different and more pragmatic branch of government and in a different time. It is widely used in Great Britain and many Eastern European countries. In fact, you can earn a diploma in Radionics in some of these countries and be admitted to practice. In the United States, it is illegal to use Radionics for any health purpose, so it is generally used for agriculture and, for lack of a better word, “wish-granting”. It is very effective for both of these purposes and more.

The heart of Radionics is the human operator’s intention, as made real by means of a very useful type of dowsing called Stick. This can be practiced anywhere, at any time, and, often, unobserved. I have used Stick in stores to choose between products. Try doing *that* with dowsing rods! Unseen, I use Stick to advise me on a course of action in high stress environments when no clear path is visible. Learning how to use Stick not only opens up the world of Radionics but provides a useful means of obtaining inner information from your subconscious which is, more often than not, correct.

Unlike dowsing rods, Stick is done with just the fingers. How you chose to do it is a matter of personal preference. Most people use two or three fingers of their dominate hand to do Stick. There are two states in Stick--unfettered movement of the fingers and Stick. Stick, in simple terms, is when the unfettered movement of the fingers stops because they “stick” to whatever surface you are moving them over. So, movement and a stop of movement is how you define Stick. After a good bit of experience, you will find there is another form of Stick which is a “feeling”. You will know when you are about to get Stick before it happens. The “feeling” skill comes with experience and is not something you need.

The following are needed to learn Stick:

1. Proper mental attitude
 - a. Calm and relaxed.
 - b. A desire to learn Stick
 - c. Confidence in your ability to learn Stick
 - d. A belief that you are about to have fun and learn something new
2. Hydration of the body
 - a. A half hour before you start the process of learning Stick, you should drink water. Dehydration will make it harder to learn Stick. Note: coffee, tea and soda are *not* water! (There is an exception* to this rule)
3. Physical comfort
 - a. Wear loose, comfortable clothing.
 - b. You may want to wear your "lucky" sweater or charm, etc.
 - c. Take off your shoes, if you want.
 - d. You should not be too hot or cold. The chair should be comfortable.
 - e. You should not feel sick.
 - f. You should not be hungry or over-full.
4. Tactile condition
 - a. If your fingers are dirty, clean them.
 - b. If your fingers are damp, use Arrowroot to dry them
 - c. If your Stick device is dirty, clean it

*The Hydration exception is for people who are just a little too relaxed or tired or something. These people benefit from water and 1 cup of either coffee or tea. Coffee and tea are both natural drinks while soda and flavored drinks are artificial and do not seem to work.

As you get used to performing Stick, some of these rules will go away, they will be personal to you. Eventually you will find that you can do Stick anywhere, at any time, without preparation.

When I first learned Stick, I was told that 80% of all students were able to do it on the first day. And 80% of the remainder was able to do it at a later date. I have found those numbers to be wrong. In the years in which I have been teaching Stick, only *one* person was unable to learn it and that was because he didn't want to. That student had been dragged to the class by a companion and was determined to prove to the world that he was untalented at Stick. If you are following the rules as laid out above, then I believe that 100% of students will learn Stick. You can prove me wrong if you wish, but then you will miss out on all the fun.

There are a lot of opinions on how many fingers you should use and how you should move them for optimal Stick. I can tell you that less than 2 and more than 3 doesn't work for most people. However, you might be the exception. Start with 3 and drop down to 2, if you wish. Some of the opinions on how to move your fingers are clockwise, counter-clockwise, side-to-side, up-and-down and in a Z-shape. Here is the truth--use whatever makes you comfortable. It is more important that you are able to do Stick than it is that you use any specific pattern.

I teach a general rule about all psychic work. That rule is,

WHAT WORKS, WORKS!

In other words, as long as something works, don't worry about it. So what if someone else said it doesn't work that way! It works that way for *you*. This is not just a good rule for psychic and Radionics work but, also, for life. If it works, then it works, and that is all there is to it.

Lab Exercise 1

In this lab, you will gain experience practicing Stick on either a Stick pad (a piece of Radionics equipment designed for Stick) or any slick surface, such as packing tape, plastic, or even metal. The goal of this exercise is for you to experience Stick with a simple yes or no answer. Using the Stick pad as your work surface, move your fingers at a constant speed over its surface. Don't press down, but let your fingers glide over the surface. Use a speed that is comfortable for you--neither too slow nor too fast. If your fingers "stick" right away, then use a tiny amount of arrow-root powder to dry your fingers. Overuse of arrow-root powder will make your fingers so slick that it will be very hard to obtain Stick. I find that if you give the arrow-root bottle a shake, then touch one finger to the inside of the bottle lid, that is usually the correct amount to use. Just spread the arrow-root over your hands.

Once you have done this for a little while, I want you to fix the following intention into your mind. If a statement is true, then I want Stick within 2 or 3 seconds. Next ask yourself the following question, "Is my name <*yourname*>", where *yourname* is your *actual* name and not a pseudonym. You do not have to say this out loud. If you experienced Stick, try out a few other questions, including questions where the answer is no. Once you feel you have this skill down, you can move on to Lab Exercise 2.

If you cannot obtain Stick, try different things to get comfortable. Take off your shoes. Face a different direction. Put on a sweater, if it is cool. Some people are sensitive to the direction they are facing when they are first learning Stick. Try facing different directions or just move to a different part of the room. If none of these actions work, take a few minutes to relax and clear your mind. Ask the instructor, or any other student who already has the skill, to help you. The way they can help is by putting their hand on you with the intention that the skill they have in obtaining Stick is copied onto and shared with you. If none of this works, then get up, leave the room, get a drink of water, and walk around a bit. After several minutes, go back to the training room and try again. Make sure you let the instructor know you are having a problem so (s)he can help! These problems will not remain once you have enough practice.

Lab Exercise 2

In this exercise, you will learn how to tune your Radionics device using Stick. You will need either a symbolic or an electronic Radionics device. Using an electronic Radionics device is better, if available.

Place a target witness in the witness well. A witness is nothing more than a photograph of the target that you want to influence using Radionics. There are other ways to create a witness when a photograph is not available, but, for today, we will use a witness that insures there is no result. Since you are just learning, we will use an artificial witness by placing a piece of paper in the witness well with the words, "HARM TO NOTHING AND NO ONE, THERE IS NO TARGET, THERE ARE NO RESULTS, PRACTICE ONLY" written on it. This will insure that any mistakes you make have no effect, since we are actually not focusing the device on a target. Of course, there is an exception to this. Some people are so good at Stick that they will not get Stick with this witness. In that case, just go with the intention that you are practicing and you want Stick to work as if there is a target, even when there isn't one. (This workaround was introduced by the Grill Flame/Stargate Project and documented in books on this subject.)

To start, we will set up the machine for use. If electrical, turn the power on. Make sure all banks are turned off and the device is not in broadcast mode. Ensure that all dials are set to zero.

At this point, select one bank of Radionics dials. Set the dial on the left to 35.5. Set the dial on the right to 21.4. These values are defined as "Kiss of God" and are normally written as 35.5-21.4. We call these values "rates".

You will now determine the optimal amount of time required to broadcast the energy associated with this setting.

If your machine has an ANALYSIS/BROADCAST switch set it to Analysis. Turn the bank you set to **ON**. Find the **INTENSITY** dial and make sure it is set to zero (this is normally a small dial). ***It can be used to determine the intensity of a rate or the amount of time needed to broadcast a rate in order to achieve balance.*** Moving the energies that define the rate is called "balancing". For this experiment we will not measure the intensity of the rate only the amount of minutes to implement the rate. Since asking for a blessing from God is always welcome you do not need to know the Intensity. More on this later.

Start moving your fingers over the Stick pad with the intention that, when the Intensity dial reaches the correct number of minutes needed to implement this rate, your fingers will stick to the pad. As you are moving your fingers, start to move the intensity knob in a slow, smooth manner. Since this is a simple rate, I expect that you will get a low number, such as three. Do not be disappointed if you get a high number or even zero. If you get zero, fix the intention in your mind that this is a practice run. Try again. If you get a number above ten, reset the intensity dial to zero and try again. Keep working at it until you get a value below five.

If you want to experience implementation of balancing this rate then move the ANALYSIS/BROADCAST switch to the BROADCAST setting for the determined amount of time. Be sure to move it back once done broadcasting.

CHAPTER 6

General Vitality (GV)

Radionics allows you to quantify values that could not be quantified in any other way. What do these numbers mean? By themselves, they don't mean much. You need a way of assigning value to the numbers that you create using Stick. Basically, you need a "line in the sand" to divide numbers into balanced or unbalanced. By tradition, that line in the sand is called General Vitality, sometimes spoken of as GV. Here are the rules for GV:

1. The rate for GV on a Kelly system is 9.00-49.00
2. You never balance GV directly. It is a divider, not something you should or can balance.
3. For normal fields, everything at or above GV is OK and does not need balance.
4. For normal fields, everything below GV needs to be balanced until it is at or above GV.
5. For fields representing poisons or Evil, everything at or above GV is BAD and needs to be reduced, preferably to zero but always to below GV.
6. Some rates such as White Light will point you to other charts such as Dark Forces. While Light must be +/- 50 than GV or you need to balance Dark Forces.
7. Some rates can be used no matter what its relationship to GV is. "Kiss of God" is one such. You are asking for a blessing from God which you can always receive no matter the GV.

Lab Exercise 3

In this exercise you will scan for your GV and record it. You will then scan for three other rates (Instructor provided, or see examples below) and record the Intensity value for them. As you record the Intensity value for each rate, notice its relationship to the GV. Does this rate require balance? If so, then reset the Intensity dial and, with the intention that you are now scanning minutes, use Stick while slowly turning the Intensity/Time knob until you ascertain the value.

You should have a standard way of writing these values. I suggest the following:

LHD-RHD,INTENSITY,MINUTES.

If this is a multibank rate (a rate that uses more than one bank), then it would be RATE,RATE...INTENSITY, MINUTES. So, if a Negative Entity has an Intensity of 120 and a balance time of 15 minutes, it would be written as

36.50-36.50, 21.00-5.50, 120, 15
(LHD) - (RHD), (LHD) - (RHD), (Int), (Min)

The "dash" symbols between the RHD (*Right Hand Dial*) and LHD (*Left Hand Dial*) rates are the indicator that you are looking at rates. Normally, I would assume that the amount of time is expressed in minutes, but, if greater time is required, I would write "D" for days, "H" for hours, or "M" for minutes. Therefore, the value above could also be written: 36.50-36.50, 21.00-5.50, 120, 15M

Please note that you normally only need *one* time value for a multi-bank rate, not two or more time values. **Treat multi-bank rates as a single rate unless instructed otherwise.**

Rate Examples

| | | | | | |
|--------------|-----------------|--------------|--------------------|--------------|-------------|
| 6.00-72.00 | Antibodies | 16.50-34.50 | Will to Live | 92.00-83.00 | Lungs |
| 17.00-29.00 | Liver | 8.00-72.00 | Colon | 11.00-41.00 | Muscle |
| 39.00-30.00 | Bladder | 3.00-82.00 | Kidneys | 0.00-96.00 | Coccyx |
| 38.75-28.75 | Poison in Metal | 49.25-49.25 | Poison in Chemical | 47.00-100.00 | Food Poison |
| 84.60-100.00 | Mercury | 80.00-100.00 | Lead | | |

Dark Forces Rate Examples

White Light 12.00-22.00 must be +/- 50 than GV, otherwise Dark Forces needs to be balanced. Get a full chart, if needed. These are practice examples only.

| | |
|------------------------------------|--|
| DF Negative Thinking influence | 11.00-21.00 |
| Dark Psychic Forces | 26.30-28.50 |
| Killer Dark Psychic Force | 10.25-34.50 |
| Killer Dark Psychic Force, Unknown | 39.00-13.00 |
| Negative Entity | 36.50-36.50,21.00-5.50 (Notice 2 bank rate) |
| Siphon's one's White Light | 30.25-18.00,18.25-98.25 (Notice 2 bank rate) |

Charts or Cold Scanning

A chart is a list of rates that are combined to perform some specific task. For example, there are charts for illness, charts for plants, and even charts for increasing wealth. There are also collections of charts in the form of books, but the largest and most complete collection of charts is the **Kelly Database**. See resources below for more information.

Almost anything that you will need to do has a chart available. Radionics practitioners generally share charts, so feel free to ask for one. Cold Scanning is a method of determining rates that do not already exist. At some point in the last 70 years, someone created a chart from scratch and they most likely used cold scanning to create the chart. You benefit from these decades of effort by having the charts available.

CHAPTER 7

RESISTANCE

Resistance is a new concept to explain an old problem in Radionics. In fact using the concept of Resistance it may be possible to build a mathematical formula to explain why Radionics sometimes works and sometimes does not. In the past, everyone intuitively understood that Resistance existed but no one seemed to codify it into a concept. It was always just the idea that, sometimes, things just don't work. There are a lot of reasons why a Radionics session might not work, such as "the Will of God" or "Unavoidable Fate", which are included in the concept of Resistance. The first two cannot be overcome, but all other forms of Resistance can be dealt with. It may not be practical, but it is possible. I define Resistance as the force or forces that interact with your Radionically-amplified intention that divert it from its goal. It may be that your Radionic intention does not have enough power to become "real" or, perhaps, it is diverted along an easier path that does not bear fruit. An easy way to think about this is to use the Copenhagen theory of quantum physics. In this theory, existence starts at a level called the "base state" and rises until it reaches the state that we think of as normal or "real", the macro state. Everything you see or experience, including yourself, starts out at the base state and reaches up to our macro, or "real", level.

Resistance is not often seen when balancing simple systems, such as chakras or imbalances in the energy fields of living things. It is more often seen when attempting to reset complex things, like luck. For example, if you want to win a large sum of money, there is a large resistance, starting with all of the other people who also want to win it. Can you overcome this resistance? Sometimes the answer is "yes" and sometimes the answer is "no". What we do know, is that you can determine a rate to "win the money", execute the rate, and still not win the money. Even if you execute the rate daily, you will still not win the money. The resistance is too great.

Is it possible to overcome resistance? Take a pencil and hold it between your two hands. Now snap the pencil. That was easy, wasn't it? Now take 20 pencils and hold them between your hands and attempt to snap them. You cannot. The pencils reinforce each other. This example, however, shows us how you can overcome resistance; if you use multiple rates to reinforce the primary rate, they can reinforce each other.

In this case, the primary rate is *"win the money with harm to no one"*. Supporting rates might be, *"remove impediments to winning the money with harm to no one"*, *"provide a path in which to win the money with harm to no one"* and so on and so forth. These supporting rates strengthen the primary rate and help to overcome resistance. In the case of the lottery, there are millions of people who want to win, so the resistance is great and hundreds of supporting rates may not be enough. A church raffle may be easier to win simply because there are less people playing and less people who care about winning. You will have to try it for yourself.

"The Will of God" and "Unavoidable Fate" are of a similar level of difficulty to overcome. God allows you to fight, to push back, but, ultimately, God wins. If you are trying to keep your favorite animal alive and

you try everything in science, Radionics, and prayer and the animal still passes, then it was intended to be that way and nothing you could do would have any effect. As a side note, one of my teachers called Radionics “electronic prayer”. I agree.

When cold scanning, new students are taught to be very specific, hence the universal standard, “with harm to no one”. Often, your intention will become real, but not in the way that you expected. I was taught that one person needed a large sum of money for their mortgage payment. They used Radionics to find the money. They got it by inheritance. Not what was expected and loaded with guilt, but Resistance Theory can explain how this happened. The intention was diverted, not enough that it did not become real but enough that how it was brought about was unexpected and undesired. I have many examples of this that I, or my students, have experienced firsthand.

CHAPTER 8

Good Housekeeping for Radionics

You want to develop good housekeeping rules from the very start when learning radionics. These rules will improve your skill and help prevent accidents. Once you are proficient, housekeeping will help you operate quicker and surer. The rules are simple:

1. Never store a witness in the witness well. Keep the witness well clean. You may want to cover it when not in use. I use a plastic cup to cover the well when not in use. Remove the witness from the well as soon as you are done. If needed, clean the well using compressed air-in-a-can.
2. Keep the witness in an envelope when not in use. Try not to touch it too much and keep it clean.
3. Keep all dials set to zero when not in use.
4. Keep all banks turned off when not in use.
5. When first powering up a machine automatically set it into ANALYSIS mode and TIMER BYPASS mode, if appropriate.
6. Keep the entire machine clean and dust free. Clean with a lint free cloth and compressed air.
7. Always use the machine with the intention of “harm to no one”.

CHAPTER 9

Speed Scanning and other Advanced Course Topics

Speed Scanning is something you can learn in an advanced course after you have had enough experience running charts. There are several ways of doing speed scanning and I will only mention it here so you know they exist and can ask for training in them at a future date.

The first method is to use Stick to pick out what Rates on a Chart need measurement. If you had a list of 100 rates, you could save a lot of time by just picking out the 20 or so that need balancing rather than checking all 100.

There are a lot of other things you can learn in advanced classes, including the use of Radionics Reagents. These are normally colored glass or gems and can speed up balancing times. Implanting rates into crystals/water/foods is common. Building a composite witness and many other things can also be included in an advanced course. Once you are using Radionics on a regular basis, I suggest taking an advanced course.

CHAPTER 10

Additional Resources

To download Ed Kelly's Radionics books, use the following link:

www.kellyresearchtech.com/download.html

Here is a description of the books from KRT's website:

“KRT Radionics Book 2: Applied Radionics

Take control of your energetic destiny with this hands-on manual featuring step-by-step instructions for safe and successful use of all KRT radionic analyzers and potentizers, as well as advanced strategies, techniques and topics. Much of the information in this book is directly applicable to other two-dial analyzers, including Hieronymus, Rogers, Mattioda and Lightning devices.”

“KRT Radionics Book 3: Radionic Rates - Alpha

This book is the result of more than 35 years of compiling, collecting, and creating radionic rates for two-dial instruments. A reference volume for use in energetic research, this database includes more than 13,800 rates and is sorted alphabetically. Ideal for use with all Kelly instruments, as well as all Hieronymus, Rogers, Mattioda, Lightning and SE-5 radionic devices.”

If you live near SouthEastern Pennsylvania you might wish to join Conshohocken Radionics. Their website is: <http://www.meetup.com/radionics/>

Student Guide

How to Cold Scan using a Kelly Radionics Workstation.

By Pennsylvania Pete, April 2011 Version 1.1

NOTE: THIS IS AN ADVANCED TECHNIQUE AND SHOULD BE LEARNED IN A CLASS. IT IS NOT FOR BEGINNERS BUT HAS BEEN INCLUDED HERE AS REFERENCE.

This quick guide is for the 3 bank system but can be used with the two bank system by just using 2 banks at a time. **NOTE: This is a means of LEARNING Cold Scanning; experienced users may use different methods from the ones explained here.**

Analysis Instructions for Cold Scan

1. Ensure that you write out your intention. *This is the most critical part.* While not really necessary, seeing your intention in writing will help you to refine it.
2. Be very careful. Look at your intention for things that could go wrong. For example, if you said you needed \$50,000 by the end of the month, there are many undesirable ways of getting that money. You might get it via inheritance or you might lose a limb so that your life insurance policy makes a payment. In general, it is best to always add the words "WITH HARM TO NO ONE" as part of your intention.
3. Refine the intention more. Did you make it too complicated? Simpler is better. Did you make it too restrictive? It is best to allow "fate" to determine how you accomplish your intention as long as the method used is desirable. For example, you might need money to pay a bill. Instead of asking for a raise or to win the lottery, make it as easy to accomplish as possible. Just state something along the line of "I wish to pay off my cupcake bill, on time, with harm to no one". This is a much more concise method of stating what you want without unnecessary complexity.
4. Ensure that the system is set to ANALYZE MODE, not BROADCAST.
5. Put your witness in the input well.
6. Zero the intensity dial. Make sure all banks of dials are set to zero and are turned off.
7. Ask the question, "IS THIS INTENTION APPROPRIATE?" A Stick right away is yes, no-Stick is a no. I have never gotten a half-Stick on this question. If the answer is no, go back and rewrite the intention until you get a yes to this question.
8. Turn on any one bank. I usually use the bottom bank first since it is the easiest to reach.
9. Rub the Stick plate while slowly turning the left hand dial. When you get a Stick, stop turning the dial. If you get a half-Stick, either turn the dial back and try again, or continue.
10. Repeat this procedure for the right hand dial.
11. Leave the bank on.
12. Ask the question, "DO I NEED ANOTHER BANK?" Rub the plate. If you Stick immediately or quickly, the answer is yes. If you do not get Stick, the answer is no. If you get a half-Stick, the

answer is that you might or might not need another bank. If you get a half-Stick, ask the question “WOULD ANOTHER BANK BE HELPFUL?” I have never gotten a half-Stick on this question.

13. If the answer you got is that you need another bank, then leave the first bank turned on and turn on another bank. Repeat steps until you run out of banks.
14. If you run out of banks but you are told you need more banks, then ask the question, “CAN I BREAK THIS UP INTO MULTIPLE RUNS?” If the answer is yes, then proceed to RUNNING INSTRUCTIONS. If the answer is no, then ask the question, “CAN I REFINE THE QUESTION TO FIT ON THIS SYSTEM OR TO ALLOW IT TO BE BROKEN INTO MULTIPLE RUNS?” You can also use reagents to cut down on the number of banks or time needed. In this case, the only limits to the number of reagents you use are how many fit into the input well. See Ed Kelly’s paper on reagents below.

Running Instructions for Cold Scan

1. Once the system is set up, you might want to write down the cold scan codes you created. These codes may be useful to you again in the future.
2. While rubbing the Stick plate, ask the question “HOW MANY MINUTES OF RUN TIME WILL THIS TAKE?” and turn the intensity dial. Most of the time, the number of minutes will be low. If the number of minutes is high, write the number of minutes down and try adding “reagents” to the witness well. I don’t use more than 2 reagents but that is not a hard-and-fast rule. Reagents are things like the crushed colored glass in test tubes sold by Kelly. It might be crystals or other stones. It might be an item of power such as a religious item. Just make sure that whatever you test you can get out of the well. See Ed Kelly’s paper on reagents below.
3. Once you have the number of minutes, set your timer or check the clock, then flip the switch from ANALYZE MODE to BROADCAST MODE.
4. When the timer rings or the time runs out, flip the switch from BROADCAST MODE to the middle position (which is not analyze or broadcast mode).
5. Turn all banks off.
6. Zero all dials.
7. When you are done, always remove the witness from the input well. This is actually the only way to turn the workstation off, since a powered down system will still work!

What to do if something goes wrong

1. If you ran over the number of minutes, there could be no effect or there could be a problem. If you do this, then ask the question, “ARE THE EXTRA MINUTES ON THIS RUN A PROBLEM?” If the answer is no, then relax. If the answer is yes, you can fix it with another cold scan using the words, “FIX THE PROBLEM CAUSED BY THE EXTRA MINUTES ON THIS RUN WITH HARM TO NO ONE.” This is normally a fast fix but you can never tell.

2. If you just can't get Stick, change something. Turn the workstation so it faces a different direction. Take off your shoes. Put on a sweater, if you are cool. Drink water. If you are very tired, take appropriate action.
3. If you get too much Stick, your hand is probably damp or dirty. You may not be able to see it. Wash and completely dry your hands. Use less than a tiny pinch of arrow root powder to dust your dowsing hand. (Rubbing the Stick plate is dowsing.)
4. Rub the plate clockwise, counterclockwise, back and forth, Z-shaped. Doesn't matter, only thing that matters is that it works for you. There is no one correct way to rub the plate.
5. Did you turn the system on? Running with electric is more powerful than running without electric. Even without electric, running with the power switch set to ON works better than having it set to OFF.
6. It is just not working and you know you can do this. Use the Pennsylvania Pete codes to bring you in harmony with the system. You will need to scan for the number of minutes.

"Prepare operator for maximum effectiveness in operating unit and results of operating unit with harm to no one." 25-27.5

"Prepare unit for proper operation and maximum effectiveness of results with harm to no one." 27.75-38.75

"Clear area of all bad and protect area during operation with harm to no one." 38.5-58

If you still have problems then ask another Radionics Operator for help. I hope that you enjoy the skills you are learning in Radionics and that you use them for good. Remember: to help yourself *without harming others* is good.

Warning: It is illegal to use Radionics for medical purposes in the United States as it is considered to be practicing medicine without a license. You may also run into many people who do not believe in Radionics or your natural abilities. Do not let these people concern you. They are unwilling to see what is in front of their eyes.

Pennsylvania Pete's Radionics Quick Chart

Version 3 Feb 14, 2010

Version 2 April 25, 2009
Version 1 November 2, 2008

Witness _____ Date _____

GV 9.00-49.00 _____

Preparation (These do not use a witness)

"Prepare operator for maximum effectiveness in operating unit and results of operating unit with harm to no one"

25-27.5 _____

"Prepare unit for proper operation and maximum effectiveness of results with no harm to no one"

27.75-38.75 _____

"Clear area of all bad and protect area during operation with harm to no one"

38.5-58 _____

Chakras

| Chakra | Front | Back |
|--------------|-------------|-------------|
| Crown | 36.00-56.00 | 54.50-23.25 |
| Brow | 10.00-60.00 | 67.50-33.00 |
| Throat | 28.00-37.00 | 61.90-20.75 |
| Heart | 60.00-66.00 | 10.50-29.50 |
| Solar Plexus | 67.00-16.00 | 63.00-12.80 |
| Sacral | 66.00-22.00 | 71.50-64.75 |
| Base | 66.00-56.00 | 50.00-50.00 |

Refresh the rays and extend them with harm to no one. 22.5-3

Clean, repair, properly spin up and extend all chakras with harm to no one. (This is a quick fix and you still need to test each chakra) 14.9-10

Use of color, “solid color light gems” and placement thereof:

Colors from the Kelly eBook:

| | | | |
|---------------|-------------|-------------------|-------------|
| Dinshah Blue | 81.00-65.00 | Dinshah Yellow | 29.00-49.00 |
| Cobalt Blue | 62.50-63.00 | Dinshah Orange | 39.00-41.50 |
| Dinshah Green | 89.00-61.50 | Dinshah Purple | 91.00-50.00 |
| White Light | 12.00-22.00 | Dinshah Scarlet | 63.00-63.00 |
| Dinshah Red | 47.50-91.50 | Dinshah Turquoise | 22.00-45.50 |
| InfraRed | 31.00-28.00 | Dinshah Lemon | 89.50-81.75 |

Put color rate on one bank then on second bank convert color into a “solid color light gem” 46.5-39.9.

If you have a 3 bank system, you can zero left hand dial, then use location chart for right hand dial of 3rd bank to **pinpoint placement** of the color gem.

Examples of right hand dial rates:

| | | |
|-------------|-------------------|---------------|
| 00.50 Colon | 02.00 Teeth, Gums | 13.00 Bladder |
| 13.50 Eyes | 14.50 Thyroid | 29.00 Liver |
| 33.00 Sinus | 35.00 Bladder | 38.00 Stomach |
| 47.00 Lungs | 63.00 Kidneys | 70.00 Heart |

Martial Arts Values:

To stir the Chi in the body: 23-23.6

To correct imbalances in the Jade Plate: 32.2-22.5

To correct energy balance 3-points-behind-ears: 39.6-24.6

Kiss of God: 35.5-21.4

Radionics Dictionary

Witness – An object that is used to direct the Radionics device to a specific person/animal/plant/thing. This is normally a photograph, but may be tissue samples such as a leaf from a tree or any of a number of things that directs the device to the target. The witness *represents* the target but *is not* the target.

Witness Well – The instrument well in which you place the witness in order to set the device onto the target.

Target – The person/animal/thing you are actually targeting with the witness.

Stick – A means of dowsing.

Stick Pad – A Radionics device that you use when performing Stick for Radionics.

Rate – A value, normally numerical, that directs the Radionics device to affect something specific for the target, as represented by the witness.

Dial Bank – The bank of dials upon which you enter the Rate.

RHD – Right Hand Dial.

LHD – Left Hand Dial.

Intensity Dial – A multi-purpose dial used to find the Intensity of the rate or the amount of time needed to balance the rate.
